

Cardinality N:N
: create a third
additional table
that contains its
own id plus one
foreign key for each
of the two tables

Cardinality 1:N : only in
the N table on the right
you will add the primary
key of the other table
(hence foreign key). The
relationship is parent table
is linking the child table.

Cardinality N:1 : only in
the N table on the left you
will add the primary key of
the other table (hence
foreign key). The
relationship is parent table
is linking the child table.
